Application No. 10/630,296

## **Continuation Sheet (PTO-303)**

Z

Continuation of 3. NOTE: a) and c) - Applicant had added new claims 14-19, drawn to different inventions which would be withdrawn by election by original presentation. The claims were also added and no corresponding finally rejected claims were canceled..

Continuation of 11. does NOT place the application in condition for allowance because: Applicant reiterates the previous argument from the response filed 9-8-05 that the composition of Topfer would not meet the present claim limitations since the magnetic field used to magnetize the particles of Topfer has been applied in one particular direction/orientation to the particles. Applicant argues that in the present inveniton, the particles as printed can be isotropic in natture. However, as was set forth in the final rejection of 9-21-05, Tofper does not teach that the particles in the film forming composition (emphasis added) has been treated to orient the particles in any manner. As such, the film forming composition (emphasis added) of Topfer would meet the limitation of being as isotropic as the film forming composition (emphasis added) claimed by Applicant.
